

Proteins

by D. Diamantis, A. Georgoulas, M. Gritzapis, V. Vafeas

Across

- A well-known category of functional proteins is
- What is the last form of structure that a protein may have?
- What is the name of the bond between two amino-acids?
- Proteins are divided into structural and
- The process of uniting monomers in order to create a protein is called

Down

- The primary structure of proteins is the of amino-acids.
- A protein structure is influenced by its pH and
- The process of splitting up proteins in order to create monomers is called
- Denaturation is the phenomenon in which a protein loses its
- The building components of proteins are the

12. The tertiary structure of the protein is its in space

9. The variable segment of an amino-acid is called side

11. How many amino-acids are essential for an organism?
